

# Solar Charge Controller 36 V 20 A

## Model

- Solar Panel Power upto 1500W maximum
- Auto high battery charge cutoff at 44 V
- Auto low battery load cutoff 32 V or transfer to grid power 35.0 V
- Recommended battery 100 AH to 300 AH
- 16 char X 2 lines alphanumeric display Displays digitally The battery voltage, the solar voltage

When Grid power is present solar charge controller conserves battery when battery volt falls below 35.0 V and tranfers load to grid. If grid fails after load is transferred to grid it transfers the load back to battery until battery is completely dicharged upto 32 volt or grid is restored

- Intelligent microcontroller handles all the charging
- Warrantee of unit 1 year
